

SURFACE SOLUTIONS
FOR GRASS & GRAVEL

Driving Range Mat

Prevents ball plugging... Makes collection easier

ADP Driving Range Mat has been specially developed to prevent golf balls from sinking into the grass surface, particularly during periods of wet weather. This makes collection of balls much easier and faster.

The mat also serves to protect the grass from rutting etc caused by ball collecting machines and other equipment.

Installation of the mat is very simple. Grass must be close trimmed, and the mat is then simply rolled out and pegged down into position. As the grass grows through the mesh, the mat disappears.

- Tough polymer mesh
- Simply unroll and peg down on existing turf
- Virtually disappears as grass grows through the mesh
- Stops balls plugging into the surface during wet periods
- Makes collection of balls much easier and more economic
- Helps stabilise and protect turf from ball collection and other machinery

Specifications

Material	HDPE Polymer
Colour	Black
Tensile Strength	7.3 KN/m
Aperture Size	7mm x 7mm
Roll Coverage	60 m ² (30m x 2m)
Product weight	730g/m ²
Roll weight	44 Kg
